---

## Abstract.

A patient-journey template that follows a participant through a Physical AI oncology trial, from consent through monitored intervention to follow-up.

*Disclaimer: This work is independent and not endorsed or sponsored by trial sponsors, FDA, CROs, sites, IRBs, regulators, or medical societies; and was generated using Artificial Intelligence.*

## Keywords

## 1 Introduction

This section introduces the patient journey and states the scope of this paper. Replace this short paragraph with the opening context; one short paragraph per section keeps the template minimal and easy to extend.

## 2 Methods

This section gives the background for the patient journey. The single image placeholder below is based on the figure code of VVUQ-02 and renders a framed box until a real PNG is dropped into the Images folder.

**Figure 1:** Figure 1. Placeholder schematic for the trial workflow.

3 Cohort and Endpoints

This section records the patient journey at a glance. The one table below is modeled on Table 1 of the VVUQ-05 final bill; keep cells short and ragged right so the table matches the body measure.

| Work    | What it is                 | Releases | Headline result  | End-goal DOI |
|---------|----------------------------|----------|------------------|--------------|
| VVUQ-01 | method and pipeline        | v0.1.0   | 51 of 51 tests   | xxxxxxx      |
| VVUQ-02 | ten-gate humanoid codebase | v1.0.0   | 172 of 172 tests | xxxxxxx      |

**Table 1:** Table 1. Trial record behind this template, at a glance.

4 Results

This section analyzes the patient journey. Keep the prose to one short paragraph and let a later revision expand each clause into its own section file.

5 Discussion

This section concludes the treatment of the patient journey and points to the back matter for acknowledgments, rights, citation, and data availability.

Acknowledgments

The author acknowledges Anthropic for access to Claude Code for the preparation of this paper; and OpenAI ChatGPT, Claude Haiku, and Google Gemini for research assistance.

Ethical Disclosures

The author declares no competing interests. This is an independent draft and is not endorsed, sponsored, or approved by any trial sponsor, CRO, site, IRB, regulator, or medical society, nor by CFR, ICH, or FDA. All supporting numbers are simulation or illustrative results.

## Rights and Permissions
