
Autonomous Code-Generation Run Log

command: vvuq run | seed: 20260525 | exit: 0
Kevin Kawchak , CEO ChemicalQDevice | 10.5281/zenodo.xxxxxxxx | June 5, 2026

Index terms

What this log records

This log captures one autonomous code-generation run: the command issued, the per-gate output, and the exit status. It is a transcript, reproduced verbatim, so a reader can replay the run from the same seed.

Session transcript

```
$ vvuq run --interaction rpi.json --seed 20260525
[gate 01] vascular no-fly ..... ACCEPT agreement 1.00
[gate 02] human collision ..... ACCEPT agreement 1.00
[gate 03] fault / e-stop ..... ACCEPT agreement 1.00
[gate 04-10] ..... ACCEPT fraction 1.000
verdict: ACCEPT (172/172 tests, mean 93.56)
$ echo $?
0
```

Gate surface

Gate	Result	Bound
vascular no-fly	ACCEPT	agreement 1.00 (hard)
human collision	ACCEPT	agreement 1.00 (hard)
dispersion	ACCEPT	CoV within bound

Table 1: Table 1. Gate surface for the run (modeled on VVUQ-05 Table 1).

Pipeline

The run is one pass of the sweep harness; the same binary drives all 32 iterations.

Figure placeholder (Images/sweep.png). The float, caption, and \label mirror the VVUQ-02 figures; replace the box with \includegraphics.

Figure 1: Figure 1. Placeholder schematic of the 32-iteration sweep that wraps this run.

Data Availability

Supporting records are openly available in the kevinkawchak/cancer-automated and kevinkawchak/physical-ai-oncology-trials GitHub repositories and are archived on Zenodo. All data sets are synthetic or illustrative and reproducible from a deterministic seed; no patient-identifiable information is included.
