

Legislative Findings of Fact

Prepared by Kevin Kawchak , CEO ChemicalQDevice | kevink@chemicalqdevice.com | 10.5281/zenodo.xxxxxxxx

Independent research draft. Not an enacted law and not legal advice; not endorsed by the FDA, HHS, or any Member of Congress.

Subject

Preamble

This document reproduces the legislative findings set out in section 2 of the bill. The findings are not operative commands; they supply the evidentiary and legal predicate a court or agency consults when construing the Act.

Findings

Congress finds the following:

- (1) Physical AI oncology investigations place robots in direct physical contact with patients, and the contact behavior is set by software that is increasingly machine-generated.
- (2) No Federal law requires verification of robot-patient interaction code to clear before that code is generated or executed.
- (3) Embodiment raises the stakes from software quality to patient safety, because a wrong motion cannot be caught downstream.
- (4) Automated verification is feasible today, demonstrated on the record and reproducible from a fixed seed.
- (5) Recognized consensus standards supply the dispersion bounds, fail-safe requirements, and contact limits to which an automated gate may be bound.

Sources and authorities

Each finding rests on a principal authority, for auditability.

Finding	Subject	Principal authority
(1)	robots in contact; machine-generated code	national Physical AI platform record
(2)	no rule on order of operations	absence of a mandate in Title 21
(4)	feasibility	VVUQ-01 (51/51); VVUQ-02 (172/172)
(5)	standards to bind a gate	ASME V&V 40-2018; ISO/TS 15066

Table 1: Table 1. Findings mapped to authorities (modeled on VVUQ-05 Table 1).

Feasibility note

The feasibility finding is grounded in two demonstrations rather than aspiration.

Data Availability

Supporting records are openly available in the [kevinkawchak/cancer-automated](#) and [kevinkawchak/physical-ai-oncology-trials](#) GitHub repositories and are archived on Zenodo. All data sets are synthetic or illustrative and reproducible from a deterministic seed; no patient-identifiable information is included.
