
Patient Journey in a Physical AI Oncology Trial

Persona: an adult trial participant
Setting: a national Physical AI oncology platform site
Lens: what the patient experiences and what the system verifies

Kevin Kawchak , CEO ChemicalQDevice | 10.5281/zenodo.xxxxxxxx | June 5, 2026

Abstract.

This template follows a participant through a Physical AI oncology trial, pairing each stage of the journey with the verification the system performs out of the patient’s view.

Disclaimer: This work is independent and not endorsed or sponsored by trial sponsors, FDA, CROs, sites, IRBs, regulators, or medical societies; and was generated using Artificial Intelligence.

Keywords

1 Persona and setting

The journey follows one illustrative participant from referral through follow-up at a platform site. The persona is a composite; no patient-identifiable information is used.

2 Journey stages

The journey is mapped in five stages.

1. **Referral.** a clinician refers the participant and screens eligibility
2. **Consent.** the participant consents under part 50 with the AI role disclosed
3. **Screening.** baseline assessments establish the starting state
4. **Intervention.** the gated procedure proceeds only after the gate clears
5. **Follow-up.** outcomes and adverse events are monitored and reported

Figure placeholder (Images/journey-map.png). The float, caption, and \label mirror the VVUQ-02 figures; replace the box with \includegraphics.

Figure 1: Figure 1. Placeholder journey map across the five stages.

3 Touchpoints and what the system verifies

Stage	Patient experience	What the system verifies
Consent	plain-language disclosure	attestation recorded
Intervention	gated procedure	fraction equals 1.0
Follow-up	monitored recovery	before execution
		adverse-event
		reporting path

Table 1: Table 1. Touchpoints paired with verification (modeled on VVUQ-05 Table 1).

4 Equity and access

The journey is designed so that nondiscrimination and accessibility duties are met at every touchpoint, and the participant, not a vendor or payer, is the party the verification protects.
